

February 2017 Investor Presentation

Forward-Looking Statements

This presentation contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. All statements, other than statements of historical facts, included in this presentation that address activities, events or developments that the Company expects, believes or anticipates will or may occur in the future are forward-looking statements. Without limiting the generality of the foregoing, forward-looking statements contained in this presentation specifically include the expectations of plans, strategies, objectives and anticipated financial and operating results of the Company, including the Company's drilling program, production, derivative instruments, capital expenditure levels and other guidance included in this presentation. These statements are based on certain assumptions made by the Company based on management's experience and perception of historical trends, current conditions, anticipated future developments and other factors believed to be appropriate. Such statements are subject to a number of assumptions, risks and uncertainties, many of which are beyond the control of the Company, which may cause actual results to differ materially from those implied or expressed by the forward-looking statements. These include, but are not limited to, the Company's ability to integrate acquisitions into its existing business, changes in oil and natural gas prices, weather and environmental conditions, the timing of planned capital expenditures, availability of acquisitions, uncertainties in estimating proved reserves and forecasting production results, operational factors affecting the commencement or maintenance of producing wells, the condition of the capital markets generally, as well as the Company's ability to access them, the proximity to and capacity of transportation facilities, and uncertainties regarding environmental regulations or litigation and other legal or regulatory developments affecting the Company's business and other important factors that could cause actual results to differ materially from those projected as described in the Company's reports filed with the SEC.

Any forward-looking statement speaks only as of the date on which such statement is made and the Company undertakes no obligation to correct or update any forward-looking statement, whether as a result of new information, future events or otherwise, except as required by applicable law.

Cautionary Statement Regarding Oil and Gas Quantities

The SEC requires oil and gas companies, in their filings with the SEC, to disclose proved reserves, which are those quantities of oil and gas, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible—from a given date forward, from known reservoirs, and under existing economic conditions (using unweighted average 12-month first day of the month prices), operating methods, and government regulations—prior to the time at which contracts providing the right to operate expire, unless evidence indicates that renewal is reasonably certain, regardless of whether deterministic or probabilistic methods are used for the estimation. The SEC also permits the disclosure of separate estimates of probable or possible reserves that meet SEC definitions for such reserves; however, we currently do not disclose probable or possible reserves in our SEC filings.

In this presentation, proved reserves at December 31, 2016 are estimated utilizing SEC reserve recognition standards and pricing assumptions based on the trailing 12-month average first-day-of-the-month prices of \$42.60 per barrel of oil and \$2.47 per MMBtu of natural gas. The reserve estimates for the Company at year-end 2010 through 2016 presented in this presentation are based on reports prepared by DeGolyer and MacNaughton ("D&M").

We may use the terms "unproved reserves," "EUR per well" and "upside potential" to describe estimates of potentially recoverable hydrocarbons that the SEC rules prohibit from being included in filings with the SEC. These are the Company's internal estimates of hydrocarbon quantities that may be potentially discovered through exploratory drilling or recovered with additional drilling or recovery techniques. These quantities may not constitute "reserves" within the meaning of the Society of Petroleum Engineer's Petroleum Resource Management System or SEC rules and do not include any proved reserves. EUR estimates and drilling locations have not been risked by Company management. Actual locations drilled and quantities that may be ultimately recovered from the Company's interests will differ substantially. There is no commitment by the Company to drill all of the drilling locations which have been attributed to these quantities. Factors affecting ultimate recovery include the scope of our ongoing drilling program, which will be directly affected by the availability of capital, drilling and production costs, availability of drilling services and equipment, drilling results, lease expirations, transportation constraints, regulatory approvals and other factors; and actual drilling results, including geological and mechanical factors affecting recovery rates. Estimates of unproved reserves, per well EUR and upside potential may change significantly as development of the Company's oil and gas assets provide additional data.

Our production forecasts and expectations for future periods are dependent upon many assumptions, including estimates of production decline rates from existing wells and the undertaking and outcome of future drilling activity, which may be affected by significant commodity price declines or drilling cost increases.

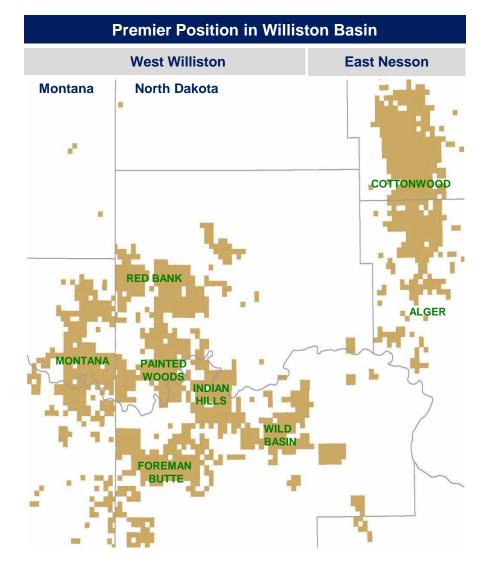

Top tier asset position

- Concentrated & controlled position 518k net acres
 - 94% held by production
 - Substantially all operated
- Over 20 years of economic inventory: 1,614 locations economic @ \$45 WTI & lower

Improving capital efficiency

- Wild Basin Bakken EUR of 1.55 MMBoe
 - 4MM pound completion
 - \$5.5MM well cost
 - ~100% IRRs
- Higher intensity completions continue to increase recoveries
- Average 2017 completion expected to be with ~10MM pounds
- ~15% production growth in 2017 and 2018
 - Free Cash Flow ⁽²⁾ positive at strip pricing

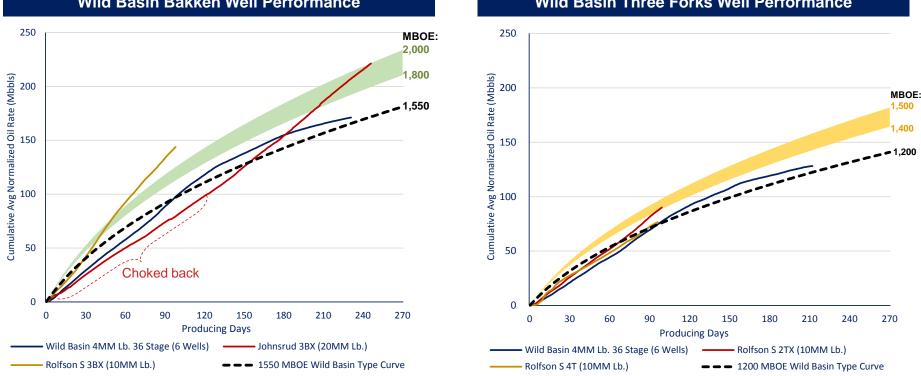

1) As of 12/31/16 unless otherwise noted

2) Free Cash Flow defined as Adjusted EBITDA less cash interest and CapEx (excluding capitalized interest, which is included in cash interest). Non-GAAP reconciliation can be found on our website <u>www.oasispetroleum.com</u>.

Driving EUR Performance Higher	 Core Bakken type curve increasing Wild Basin type curve of 1.55 MMBoe Core excluding Wild Basin of 1.09 MMBoe Increasing proppant intensity and stage counts & expect further EUR improvements
Lowering Well and Operating Costs	 \$5.5MM well costs for 4MM pound slickwater completion 2017 LOE range of \$6.75 to \$7.75 per Boe from over \$10 per Boe in 2014 Vertical integration allows for protection against cost inflation
Infrastructure Delivering Increased Margins	 Better oil differentials/realizations – DAPL expected to drive diffs lower Higher gas capture and gas realizations Wild Basin infrastructure to pay dividends and increase reliability
Multiplying Success through Core Bolt-on Acquisition	 Basin leading completion designs driving EUR performance Low cost operator Leverage benefits of legacy Oasis infrastructure within operations areas Oasis advantages transferable to newly acquired assets
	Improving capital efficiency & operational performance

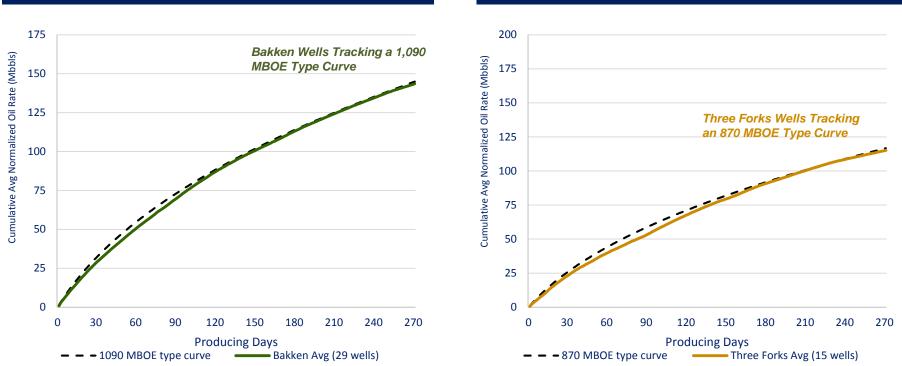

Wild Basin Bakken Well Performance

Wild Basin Three Forks Well Performance

Wild Basin Highlights

- Single well IRR ~100% for both Bakken and Three Forks at strip pricing
 - Assuming \$5.5MM current well costs and 4MM pound completion
- Remaining upside from ongoing completion testing program: 25%+ uplift in EUR
- Wild Basin represents approximately 1/3rd of Core inventory

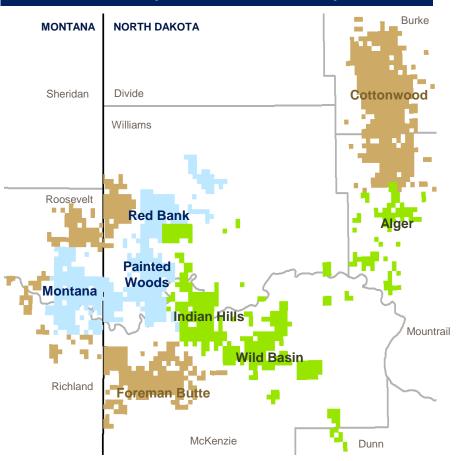

Core (Ex. Wild Basin) Bakken Well Performance

Core (Ex. Wild Basin) Three Forks Well Performance

Core (Ex. Wild Basin) Highlights

- Substantial improvements in well performance across our core acreage, not just in Wild Basin
 - Additional upside remains with our active completion testing program. Limited data on 10+MM Lb. fracs outside of Wild Basin at present, but encouraging results from several peers yield potential for further EUR increases above these levels
- This acreage represents a considerable part of our 2017 program
- Core Ex. Wild Bain represents approximately 2/3^{rds} of our remaining core inventory

Inventory in the Heart of the Play

3,073 operated locations in the heart of the play

- 770 core locations (~1/3 in Wild Basin)
- 1,614 location with breakeven prices below \$45 WTI
- Equates to >20 years of remaining highly economic inventory at current pace of completions
- Further upside with increasing frac intensity across all three areas

	Gross / Net Op	EUR	Break-even
Area	Locations ⁽¹⁾	(Mboe) ⁽²⁾	(\$WTI)
Core	770 / 483	1,200	Below \$40
Extended Core	844 / 602	650	Below \$45
Fairway	1,459 / 1,084	450	\$45 to 55
Total Locations	3,073 / 2,169		

1) As of 12/31/16

2) EUR based on high intensity Bakken completion design in all areas except Cottonwood.

2017 Plan Highlights

\$410MM

\$605MM

- CapEx
 - Drilling & Completions:
 - Midstream (OMS): \$110MM
 - Other capital⁽¹⁾ : \$85MM
 - Total CapEx:

E&P Highlights

- Completing 76 gross (51.7 net) operated wells in 2017
- Higher sand loadings (average completion in 2017 expected to be ~10MM pounds)
- Improved proppant placement (precision fracs, increased stage counts from 36 to 50, proppant suspension)
- Increasing rig count from 2 rigs in Wild Basin to 4 rigs mid-year, focused on the Core
- Running OWS all year and 2nd frac crew intermittently throughout year
- Exiting year with 4 rigs with plans on running 5 rigs in 2018 with 2 full time frac crews

OMS Highlights

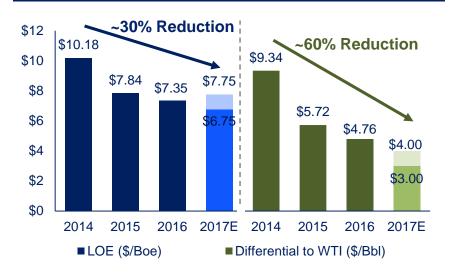

- OMS capital focused on accelerating Wild Basin gathering systems, increasing scope of project, and supporting growth outside of Wild Basin
- 1) Includes OWS, administrative, and approximately \$15 million for capitalized interest.

Production Growth Profile

Positive cash flow in 2017 & 2018 at strip

>15% 100 41% >83 16%. 80 70.5 72 62 Mpoepd 40 65.5 50 53 20 0 2017E 2016 2017E 4Q16 2018E Exit Exit Historicial Estimated / Pro Forma Exit

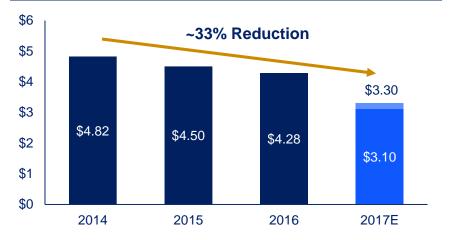

Improving Operating Cost Structure

Highlights

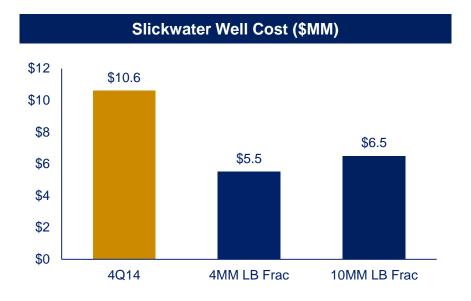

- Substantial LOE improvements during last three years across all operating cost types
- Increasing utilization of infrastructure lowers operating costs and decreases production downtime
- Continuing to realize efficiencies throughout our operations and the entire organization

Steady E&P G&A Improvements (\$/Boe)

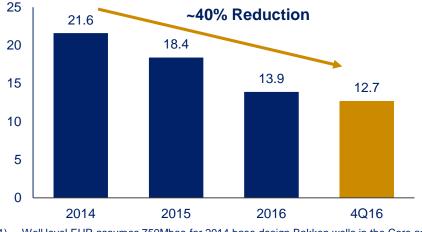

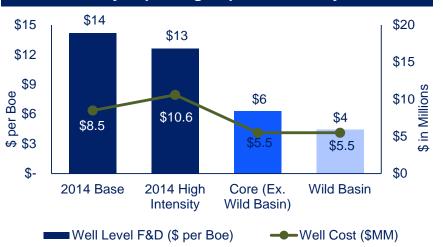

Average Spud to Rig Release (Days)

Substantially Improving Capital Efficiency in Core⁽¹⁾

Highlights

- Well cost and EUR improvements combined to bring single well F&D costs into the \$4-6 per Boe range in the Core
- Ability to mitigate impact of cost inflation
 - Increased reliance on Oasis Well Services
 - Significant operational efficiency gains across both drilling and completion activities
 - Supply chain improvements

1) Well level EUR assumes 750Mboe for 2014 base design Bakken wells in the Core and 1,050Mboe for 2014 high intensity design Bakken wells in the core. Current core high intensity EURs are 1,200 Mboe and current Wild Basin high intensity EURs are 1,550 Mboe. Assumes a 20% royalty burden in all cases.

www.oasispetroleum.com

Asset Highlights

Saltwater gathering lines (over 300 miles)

 Increased volume flowing through gathering lines from 40% at YE14 to 79% in 4Q16

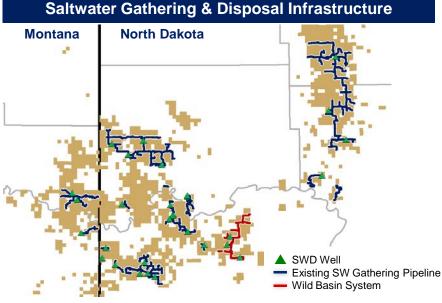

Saltwater disposal (SWD) wells (30)

 Increased volume disposed in company wells from 60% at YE14 to 88 % in 4Q16

Strategic Value

- Lowers LOE & increases operational efficiency
- Removes trucks from road & minimizes weather impacts

2016 EBITDA of \$80MM growing to 4Q17 annualized estimate of \$155MM⁽¹⁾

Assets in Wild Basin are Online

- Natural gas gathering & processing
 - 80MMscf/d Gas Plant
- Oil gathering, stabilization and storage
- Saltwater gathering and disposal wells
- Synergy with Williston Basin Acquisition

2017 Impact

- Lowers overall Company LOE
- Oil and gas infrastructure lowers MT&G expense, offset by small commitment on long distance pipeline

Wild Basin Project

Improves natural gas price realizations

Wild Basin Gas Plant & Crude Storage

www.oasispetroleum.com

- Improving capital efficiency & operational performance
 - Lowering well costs while increasing EURs
- Prudently managing balance sheet while being one of the first E&P companies to become free cash flow positive
 - \$1.15Bn revolver
- Focusing on the "Core of the North American Core"

Appendix

3rd Party Infrastructure Highlights

Crude oil gathering

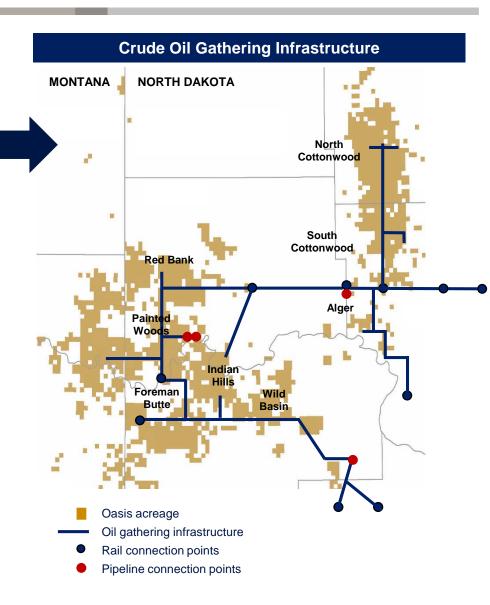

- Realized \$4.91/bbl differential in 4Q16
- Signing longer term contracts at fixed differentials
- Provides marketing flexibility to access to 4 pipeline and 10 different rail connection points
- 81% gross operated oil production flowing through pipeline systems in 4Q16

Gas gathering and processing (3rd party systems)

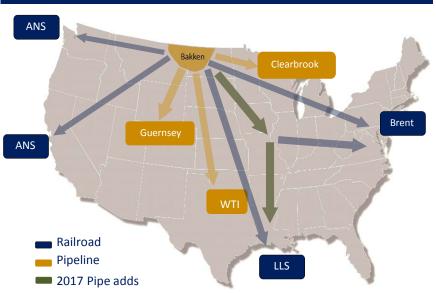

- Average realization of \$2.98/mcf in 4Q16
- 98% of wells connected to gathering system
- 93% gas production currently being captured, vs. North Dakota goal of 77%

Infrastructure considerations

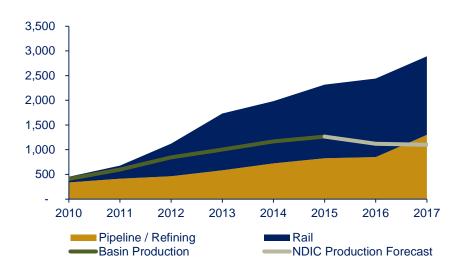

- Drives higher oil and gas realizations
- Provides surety of production when all infrastructure in place
- Need infrastructure in place when wells come on-line
- Regulatory environment

Takeaway Options

Takeaway Capacity (Mbopd) ⁽¹⁾

- Pipeline and rail provide multiple destinations for Bakken crude
- Oasis can ship crude via rail or pipe to achieve the highest realizations
- New pipelines provide excellent optionality for low cost transportation
- Given the pipe and rail options, there is ample capacity for Bakken crude production

	Current Capacity	Additic	ons
(MBopd)	YE2016	2017	2018

1) Guidance was provided in 2/22/17 press release.

2) Average sales prices for oil are calculated using total oil revenues, excluding bulk oil sales, divided by net oil production.

3) Excludes marketing expense associated with non-cash valuation change on our pipeline imbalances and line fill inventory. These items are included under "Bulk Purchase of Oil Cost and non-cash valuation adjustment."

4) Non GAAP Adjusted EBITDA Reconciliation can be found on the Oasis website at www.oasispetroleum.com.

5) Excludes capital for acquisitions of \$1,563MM and \$781.5MM in 2013 and 2016, respectively.

6) Non-Cash Amortization of Restricted Stock is included in G&A.
